

# HUSH AVX Music Server

## Quick Start

- 01 Introduction
- 02 The Interface
  - Music Library — Albums
  - Music Library — Tracks
  - Now Playing — Tracklist
  - Now Playing — Current Track
- 04 Ripping a CD
- 05 Playing an Album
- 06 Selecting a Track
- 07 Queuing / Saving a Tracklist
- 08 Saving a Tracklist

## Introducing the HUSH AVX Music Server

The AVX Music Server stores up to 1600 CDs and plays them through your Hi-Fi.

The Server is controlled using the DigiFi™ Interface, which is hosted on a handheld PDA.

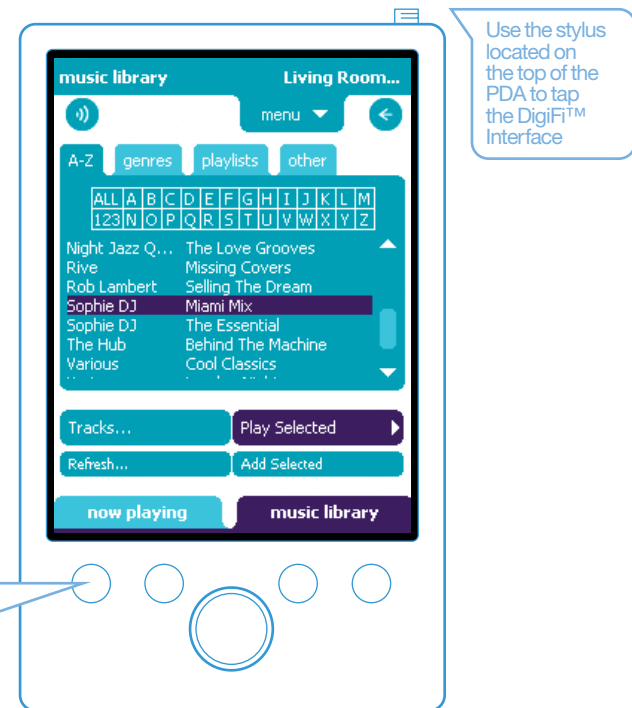

The PDA is connected to the Server by WiFi.

The DigiFi™ Interface makes it easy and intuitive to select and play albums and tracks, and to create, edit and listen to playlists.

This Quick Start guide gives instructions for basic operation.

Please refer to the full User Guide for more detailed instructions. It also covers advanced functions, installation, and configuration.

The DigiFi™ Interface is hosted on a handheld PDA Unit which communicates with your HUSH AVX Music Server by WiFi.

## The Interface

The DigiFi™ Interface is based on a simple tab system. It's easy to use and intuitive to learn.

Just tap on a tab or button to navigate.

There are 4 screens you're likely to use the most:

- Music Library — Albums
- Music Library — Tracks
- Now Playing — Tracklist
- Now Playing — Current Track

### Music Library — Albums

Where you'll find your music collection displayed.

### Music Library — Tracks

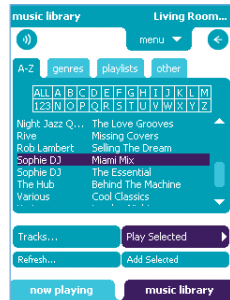

Lets you see all the tracks on your album or playlist.

### Now Playing — Tracklist

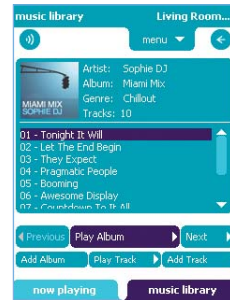

Shows you the tracks in the Now Playing Tracklist.

### Now Playing — Current Track

Shows you the current track being played.

Music Library —  
Albums

Music Library —  
Tracks

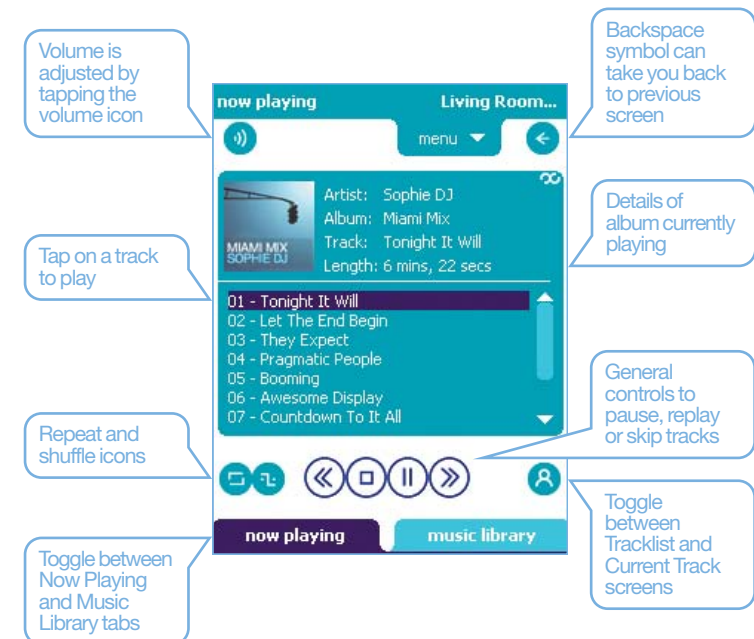

Now Playing —  
Tracklist

Now Playing —  
Current Track

For normal listening, it is a simple matter of 'toggling' between the Music Library and Now Playing screens to play albums, and using the Tracks screen to select individual tracks.

- ◀ The backspace symbol can take you back to the previous screen.
- 🔊 Volume can be adjusted by tapping this icon and moving the slider.
- ⏸ To pause the current track, tap the pause icon.
- 🔁 To select the repeat function, tap the repeat icon.
- 🔀 To select the shuffle function, tap the shuffle icon.

## Ripping a CD

Just place a CD in the tray and close.

The AVX will do the rest, copying the music from your CD on to the server.

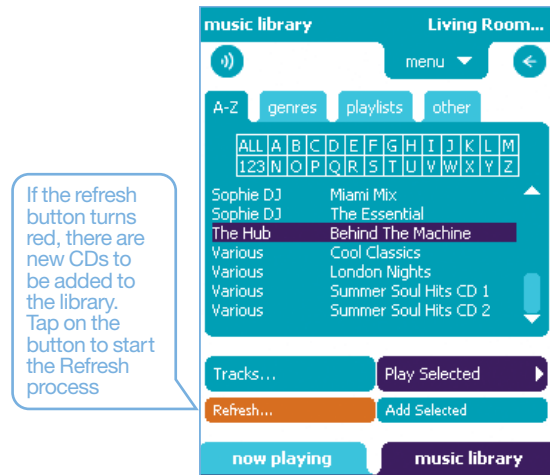

You can tell it's ripping by the flickering green and blue lights.

After a short time the CD tray will pop out.

You'll notice that the Refresh button on the Music Library screen has turned red.

Tap this button and the track information will be automatically updated.

You can now play the album.

## Playing an album

Most people start by using the A-Z function on the Music Library screen.

Tap All and the list of all artists and their albums will appear.

You can tap a letter to quickly find an artist.

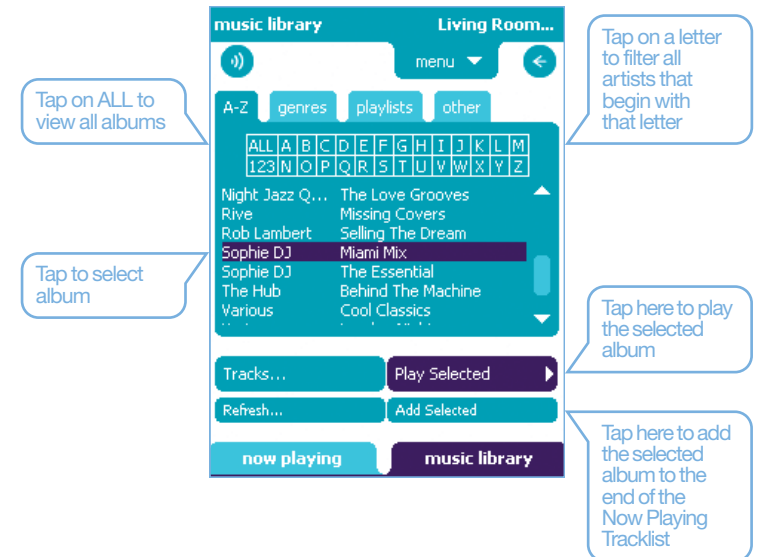

To select an album, highlight it.

Then tap Play Selected.

The server will automatically play the album and the Now Playing screen will appear.

This screen shows the album and artist details, the track length, and the tracks now in the tracklist.

You can either add albums (Add Album) or individual tracks (Add Track) to the tracklist.

## Selecting a Track

Go to Music Library.

Select an album.

Select Tracks.

Highlight a track.

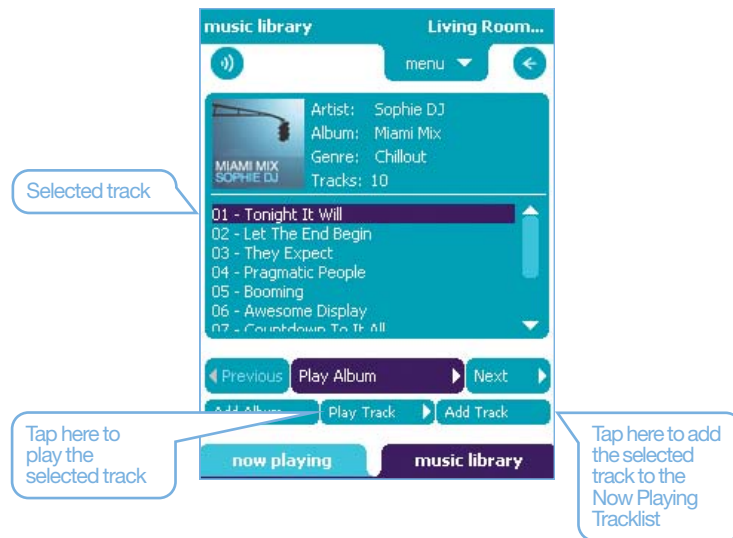

To play the track, tap Play Track. The track will play and the Now Playing screen will appear.

Alternatively, you can tap Add Track. This adds the track to the end of the Now Playing tracklist.

You can change tracks on the Now Playing screen in two ways:

Either tap once on the track you want to listen to.

Or tap the forward or back buttons.

## Queuing

The Now Playing screen works as a tracklist.

You can keep adding albums or individual tracks to the Tracklist.

You can also save the Tracklist as a playlist.

## Saving the Tracklist

Tap the Menu tab at the top of either the Now Playing or Music Library screen.

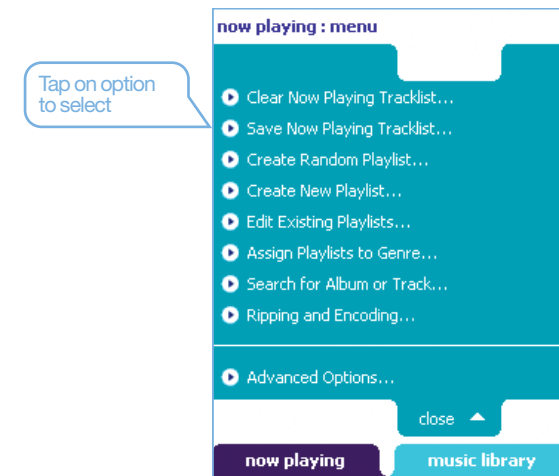

Tap the Save Now Playing Tracklist option.

On the Name Playlist tab (page 8), type in a name for your new playlist.

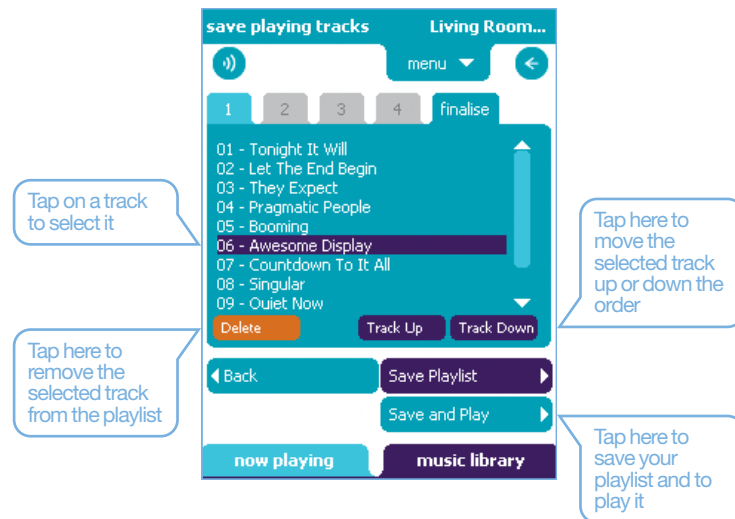

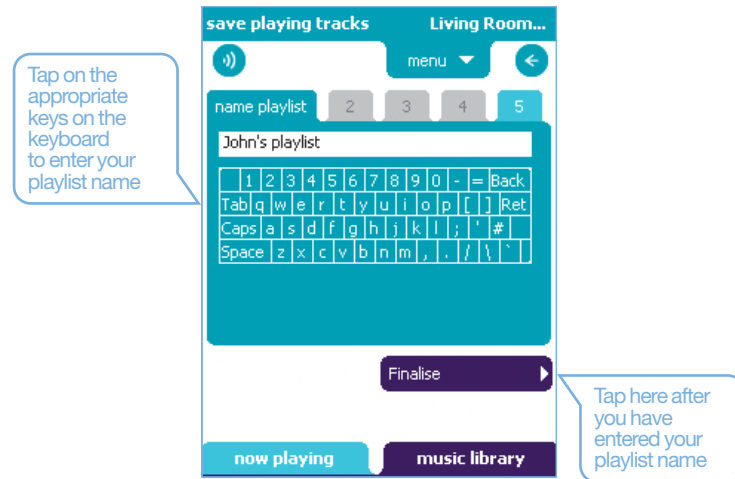

Tap the Finalise button.

On the Finalise tab (page 8) you can move the track order by using the Track Up or Track Down buttons.

You can then Save and Play.

## Saving a Tracklist (continued)

Discover an entirely new music collection — Your own  
 Once you've mastered basic album and track selection, and created and saved tracklists, you can go on to experience all the other features that the HUSH AVX Music Server has to offer.

This includes Creating Playlists, Defining Genres, Advanced Searches, and Random and Repeat functions. To find out more, please refer to the User Guide.
